

SOFTWARE + AI ENGINEERING

Jonel Bryan Ablog

Software Developer building toward Software Engineering

Building thoughtful digital experiences.

Responsive full-stack applications.

Practical AI-powered features.

Useful, human-centered experiences.

03 PROJECT CASE STUDIES

PROFILE • TECHNOLOGY • CAPABILITIES

Behind the work.

About

Hi, my name is Jonel Bryan Ablog. I'm a web developer from the Philippines who enjoys creating modern web applications with thoughtful user experiences. I love turning ideas into polished projects that feel intuitive, useful, and enjoyable to use.

I'm currently expanding my skills in full-stack development while working toward a career in software engineering.

Education

University of Northern Philippines

Bachelor of Science in Information Technology

Cum Laude Graduate

Focused on software engineering, database systems, web development, and building practical applications through hands-on projects.

Career direction

Software Engineer

To become a software engineer who creates thoughtful, reliable, and user-centered software while continuously learning modern technologies and building meaningful digital experiences.

Core technologies

Interface

React · TypeScript · CSS3

Application services

Node.js · Express · Python · FastAPI

AI features

Google Gemini · LLM Integration · Prompt Engineering

Current focus

Currently seeking opportunities as a Software Engineer where I can contribute to real-world projects, expand my technical expertise, and continue crafting modern full-stack and AI-powered applications.

Professional strengths

- 01 Problem Solving
- 02 Adaptability
- 03 Continuous Learning
- 04 Attention to Detail
- 05 Team Collaboration
- 06 Curiosity & Initiative

Working principles

- 01 Build with Purpose
- 02 Keep Learning
- 03 Quality over Quantity
- 04 Collaborate with Respect
- 05 Never Stop Improving

I-Nelory

Personal Memory Journal

A private full-stack journal for saving, organizing, and rediscovering meaningful memories through cloud media storage and AI-powered natural-language search.

Purpose

The project creates a private space for meaningful memories without the distractions of traditional social media. Its focus is personal storytelling, organization, preservation, and rediscovery.

What I built

- Photo and video memories with metadata, albums, and favorites
- Archive and restore controls for a personal collection
- Natural-language memory search powered by Google Gemini AI
- Storage usage and quota management
- Notifications and appearance preferences
- Account data export and account deletion controls

AI search

Google Gemini AI supports natural-language memory search. Users can look for memories by context, such as beach moments, a particular year, travel videos, or a mood associated with a memory.

Technology

Frontend

React 19 · TypeScript · Vite · Tailwind CSS · Framer Motion · React Router DOM

Backend

Node.js · Express.js · RESTful API · Prisma ORM

Database

PostgreSQL / Neon

Storage

Cloudinary

Authentication

JWT authentication · bcrypt password hashing

AI

Google Gemini AI

Deployment

Vercel frontend · Render backend

Architecture

Cloudinary handles media storage, while Gemini supports AI-powered memory search.

IntelliCLIQ

AI-Powered Café Ordering Application

A full-stack café ordering experience with customer and administrator workflows, order tracking, analytics, and guided AI-powered menu recommendations.

Project context

It began as a capstone project and was developed into a portfolio-quality full-stack application.

Customer systems

- Authentication, menu browsing, and order customization
- Smart Search AI recommendations
- Shopping cart, checkout, and order receipt
- Order history, tracking, and notifications
- Customer feedback submission

Administration

- Dashboard overview, revenue analytics, and sales reports
- Weekly and yearly reporting with best-seller analytics
- Menu item and order management
- Customer feedback management

Guided AI recommendations

Smart Search is a guided recommendation system, not a traditional chatbot. Customers choose a category, taste preference, temperature, and budget range. Gemini analyzes the available café menu and returns approximately 2–3 personalized recommendations with a match score, item, price, reasoning, tags, and an Add to Cart action.

Technology

Frontend

HTML5 · CSS3 · JavaScript

Backend

Node.js · Express.js

Database

Firebase Realtime Database

Authentication

Firebase Authentication

AI

Google Gemini API · Gemini 2.5 Flash

Deployment

GitHub Pages frontend · Render backend

Architecture

The backend returns personalized recommendations to the ordering interface.

Nelume

AI-Powered Career Assistant

An AI-powered career platform bringing together resume analysis and rewriting, cover-letter generation, interview preparation, and interactive learning resources.

Career systems

AI Resume Chat + Analyzer

Resume-aware career conversations and ATS guidance alongside compatibility, match, strengths, improvement areas, missing skills, keyword, grammar, and summary analysis.

Writing Tools

ATS-friendly resume rewriting and position-specific cover letters with PDF export.

Interview Preparation

AI-generated technical, behavioral, HR, project, and problem-solving questions with sample answers; question-by-question mock interviews with evaluation and summary.

Learning Resources

Resume Quiz and Resume Learning Hub for interactive practice and guidance.

Engineering focus

The project demonstrates full-stack web development, REST API development, AI integration, and prompt engineering.

AI usage + privacy

Several Gemini-powered features share an AI request allowance. Client IPs are normalized, salted, and SHA-256 hashed before use as Redis keys; raw IP addresses are not used as Redis keys.

Technology

Frontend

React · TypeScript · Vite · CSS3

Backend

Python · FastAPI

AI

Google Gemini API · Prompt Engineering

Supporting libraries

pdfplumber · google-genai · python-dotenv

Usage enforcement

Upstash Redis

Architecture

Upstash Redis supports AI usage enforcement.

Delivery systems

Project systems			
Project	Client	Application services	Data / supporting systems
I-Nelory	React / TypeScript	Node / Express REST API	Prisma · PostgreSQL / Neon · Cloudinary · Gemini
IntelliCLIQ	HTML / CSS / JavaScript	Node.js / Express	Firebase Authentication + Realtime Database · Gemini
Nelume	React / TypeScript	Python / FastAPI	PDF processing · Gemini · Upstash Redis usage enforcement

From interface to intelligence.

I build and contribute to web applications across interfaces, application logic, data, AI features, and deployment.

01 Full-Stack Web Development

Build complete web applications from interface to data and deployment.

React · TypeScript · Node.js · Express · PostgreSQL · Prisma

02 Frontend Development

Create responsive, accessible interfaces with thoughtful motion and polish.

React · TypeScript · Tailwind CSS · Motion · Responsive Design · Accessibility

03 Backend & API Development

Develop application logic, APIs, authentication flows, and server features.

Node.js · Express · FastAPI · Python · REST APIs · JWT

04 AI Feature Integration

Add useful AI search, evaluation, recommendation, and assistant features.

Google Gemini · Prompt Engineering · Structured Output · AI Search · AI Chat · Recommendations

05 Database & Authentication

Organize application data, user accounts, permissions, and access flows.

PostgreSQL · Prisma · Firebase · Upstash · JWT · Authentication

06 Deployment & Optimization

Release applications, resolve issues, improve performance, and maintain builds.

Vercel · Render · GitHub · Debugging · Performance · Maintenance

Working principles

Build with Purpose Keep Learning Quality over Quantity Collaborate with Respect

Never Stop Improving

Let's connect.

Ideas become systems. Let's build the next one.

If you'd like to discuss software work, AI features, or a project, email me directly or use one of the routes below.
